SCOUTTRACT · HUNTING · PILOT

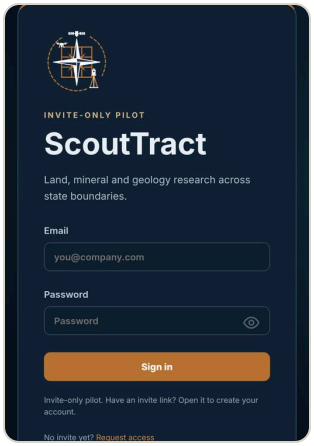

Quick Start

Get in, install it on your phone and learn the tools you will use first. Updated 4 Nov 2026.

Screens below are from the live app, using a test account and sample points. Online copy: **scouttract.com/guides/quick-start.pdf**

1 Sign in from your invite

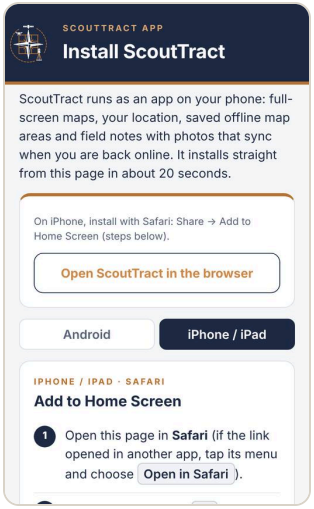

- Open the invite email **on your phone** and tap **Accept your invite**. The link is private and works once.
- Set your password, then read and accept the terms.
- Pick your state. Your account opens in **Hunting** mode (switch any time from the mode button at the top).
- Next time, sign in at **scouttract.com** with your email and password. Forgot it? Tap **Forgot password?** for a code by email.

2 Put it on your phone

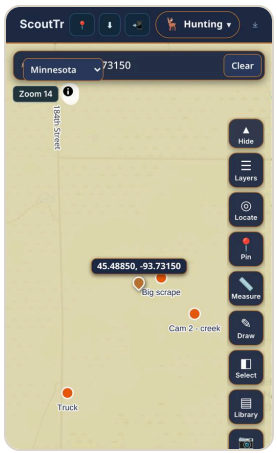

- **iPhone (Safari):** tap Share ⬆, then **Add to Home Screen** › **Add**.
- **Android (Chrome):** tap the ⋮ menu, then **Install app** or **Add to Home screen**.
- **Android app:** on your phone open **scouttract.com/install**, tap **Download the Android app (APK)**, open the file and tap **Install** (allow this source if asked). Not on Google Play yet.
- Open ScoutTract from the new icon and tap **Allow** for location. No iPhone app yet: on iPhone use the web app.

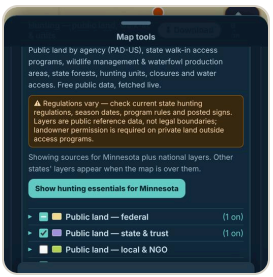

> Same account on your phone, the Android app and your computer.

3 Map basics

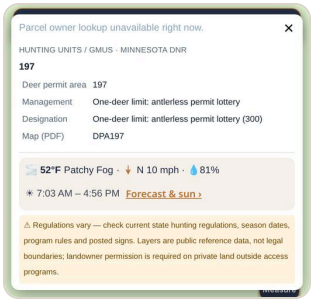

- **Search** (top bar): an address, a place or lat/long such as `45.4885,-93.7315`.
- **State drop-down** (left of the search bar): jump to another state on your account.
- **Layers**: tick what you want to see (public land, walk-in areas, hunting units, CWD and more), untick to hide. Keep on only what you need.
- **Locate** centres the map on you; tap again to follow as you walk.
- Swipe the bottom sheet up for more layers and tools.

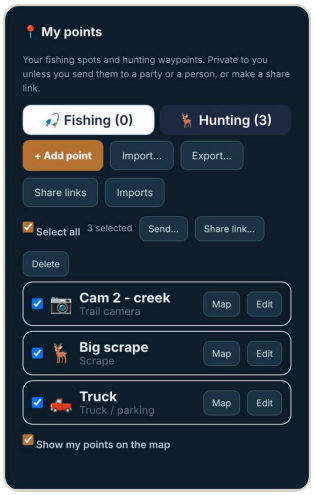

4 Tap a parcel or public land

- Tap the map to see what is there: **public land** (agency and unit), **hunting units** with links to the agency map and rules, and **private parcels** with owner details where the county publishes them.
- Each popup shows the local weather, wind and sunrise / sunset.
- Layers are reference data, not legal boundaries. Check current regulations and posted signs, and get permission for private land.

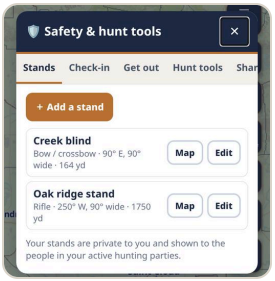

5 My points

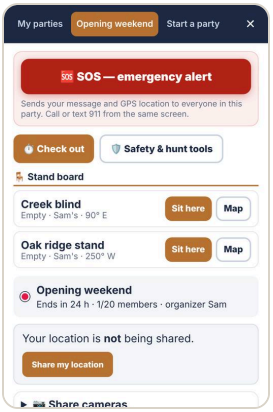

- Open **More › Settings › My points**, Hunting tab.
- **+ Add point**: scrape, trail camera, truck and more. Points are private to you.
- **Import…** and **Export…** CSV, GPX or KML for your GPS or Google Earth.
- Tick points, then **Send…** to your party or a person, or make a **Share link**.

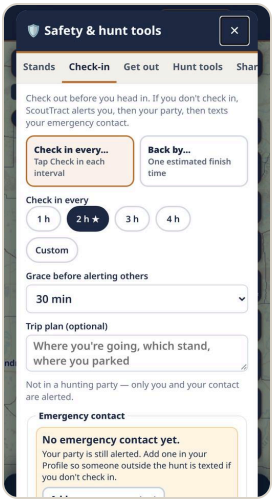

6 Stands and the stand board

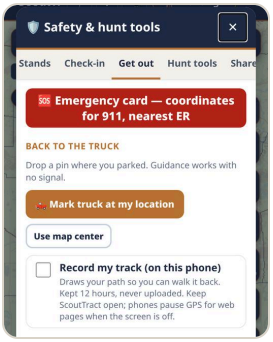

- Open **More › Safety › Stands** and tap **+ Add a stand**: name, weapon and shooting direction.
- Your stands are private and are shown to the people in your active hunting party.
- In a party, the **Stand board** shows who is sitting where. Tap **Sit here** when you get in the stand.

7 Check-in timer, SOS and fall detection

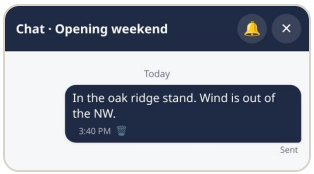

- **Check-in** (More › Safety): pick **Check in every…** or **Back by…**, add a trip plan, then **Check out – start hunt**. Miss a check-in and ScoutTract alerts you, then your party.
- **Emergency contacts (optional):** add up to three in Settings / Account and send each one their private confirmation link. A confirmed contact with an email gets an email alert with your location after an SOS or an uncancelled crash/fall alert. **Coming soon: emergency contact texting is being turned on shortly. Email alerts work now.** Medical info (optional) is in Settings.
- **SOS** (red button with a party open) sends your message and GPS to everyone in the party.
- **Get out**: the emergency card with your coordinates and nearest ERs, mark the truck, and record your track to walk back.
- **Crash & fall detection (beta)** is off until you turn on a profile (Tree stand, Biking, ATV / UTV, Off-road) in **Safety › Settings**. A hard fall then no movement starts a loud 60-second countdown; tap **I'm OK** to cancel. In the Android app it keeps working with the screen off; in the web app keep ScoutTract open.

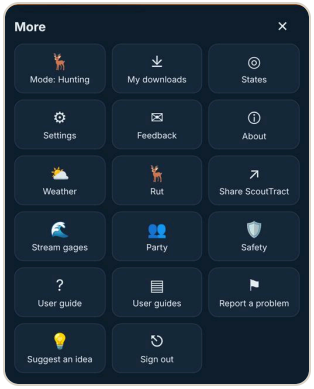

> **Always call 911 first in an emergency.** ScoutTract never calls 911 for you, and alerts need a cell signal.

8 Groups and messages

- Open **More › Party**, tap **Start a party**, name it and share the link with your group.
- **Chat** and quick replies (On my way, At the truck), push-to-talk and shared pins.
- Live location is **off** until you tap **Share my location**; stop with one tap. Needs a cell signal.

9 Help and feedback

- **More › Report a problem** or **Suggest an idea** goes straight to us. **Feedback** is there too.
- **More › Quick Start guide** opens this guide; **User guides** has the rest.
- Questions: **catchall@scouttract.com**.

> A full hunting user guide is coming. It will appear under More › User guides.

ScoutTract map data is for research. It isn't a survey or title opinion; always verify locations and boundaries on the ground. Check current state hunting regulations and posted signs. Terms, Privacy Policy and Data Disclaimer: scouttract.com/legal/terms, /legal/privacy and /legal/disclaimer.
